### Assessing Dangerousness: Violence by Batterers and Child ...

It would be difficult to imagine any forensic clinician who has not had to contend with a dilemma involving risks to a child or an adult in an intimate relationship marred by violence. The statistics cited in Assessing Dangerousness: Violence by Batterers and Child Abusers reflect the stark fact that domestic violence is commonplace. Nearly half a million female victims of domestic violence seek treatment for injuries each year in the United States, more than for any other cause of injury.

### **Assessing Dangerousness**

Evaluators should note that both threatened and actual homicide attempts may take place in cases where the batterer's previous history of violence had not been severe (McCloskey et al., 1995), and that the woman's own assessment of the likelihood of future violence by a batterer may be more accurate than any other predictor (Weisz et al.). Additional relevant questions include: Has the batterer ever choked the mother?

The Danger Assessment helps to determine the level of danger an abused woman has of being killed by her intimate partner. It is free and available to the public. Using the Danger Assessment requires the weighted scoring and interpretation that is provided after completing the training. The Danger Assessment is available in a variety of languages.

### **Danger Assessment - Executive education**

Assessment (like all intimate partner violence risk assessment tools) as a guide in the process rather than as a precise actuarial tool.<sup>2</sup> It also indicates the need for a more precise cutoff score. Perhaps giving greater weight to certain questions, such as those related to guns and threats, could accomplish greater precision.
