The new 5-speed automated manual transmission from Opel/Vauxhall, Easytronic 3.0, is using electrohydraulic actuators for clutch and gear shifting. The new AMT can also support engine Stop & Start functions. The maximum input torque of the transmission is 190 Nm and can be fitted on 1.4 L gasoline engines or 1.3 diesel engines.

Auto-recloser or auto-reclosing scheme exactly does this. In an overhead transmission system, 80% of the faults are transient, and 12% of faults are semi-permanent. In auto-reclosing scheme if the fault is not cleared at first attempt, there will be double or triple shorts of reclosing until the fault is cleared.

This automatic transmission uses a set of gears, called a compound planetary gearset, that looks like a single planetary gearset but actually behaves like two planetary gearsets combined. It has one ring gear that is always the output of the transmission, but it has two sun gears and two sets of planets. Let's look at some of the parts:
