Overview. An often overlooked area of cloud forensics is data and metadata stored on the local device. Unsurprisingly, devices which have synchronized to a cloud storage service may contain a wealth of information relevant to an investigation. Devices regularly record metadata on locally synchronized files in addition to files only present in the cloud.

Cloud Network Forensics The first thing that we need to talk about is defining why cloud network forensics is even necessary. The answer to that is rather simple: because of attackers trying to hack our cloud services. We need to be notified when hackers are trying to gain access to our cloud infrastructure, platform, or service.
