Researchers have already shown that failure characteristics and behaviour of rock materials under dynamic loading vary apparently compared to their static counterparts. Moreover, it is well known that dynamic responses of rock will be greatly influenced by the loading amplitude, the loading form, and the loading duration time.

Dynamic Failure Characteristics and Behavior of Rock Materials

This special issue compiles thirty-seven original papers covering the following topics: dynamic constitutive relation and strength criterion of rock, rock dynamic testing method and technology, dynamic mechanical properties and behavior of rock, propagation law of the stress wave in rock mass, prevention and control of dynamic failure in rock engineering, mechanical response of rock under ...

Dynamic Failure Characteristics and Behavior of Rock Materials

Under highly dynamic conditions, the strain-rate dependence of material response and high levels of hydrostatic pressure cause the material behavior to be significantly different from what is observed under quasistatic conditions.
