To solve many problems in heat and mass transfer, the method of shell balances must be employed. Effectively, a shell balance (in the context of heat transfer) states that the rate of heat into an infinitely thin shell must equal the heat out of that shell. This will be demonstrated with an example below. 2.1.2 COMMON BOUNDARY CONDITIONS

The spray water releases heat to the backwater in the SHX, and then it is pumped into the spray tower for the next circulation. During the whole heat transfer process, the spray water works as a medium to transfer both sensible and latent heat from air to backwater. Fig. 2(c) shows the heat and mass transfer relations between these three fluids. In the spray tower, both heat and mass are transferred from the air to the spray water, so the total heat transfer includes sensible heat and latent ...
