The engine itself is oriented like an automotive engine, and the rear of the engine mates with a drive unit much like the lower unit of an outboard, which can tilt. These two parts join at a hole in the transom of the boat, where a rubberized part called the "boot" seals out the water but flexes to allow the drive unit to move and turn.

Even when a boat owner has followed a rigorous maintenance schedule, a marine engine won't last forever. Quite the contrary; shelling out thousands of dollars to replace a marine engine after only a few seasons of hard use (or neglect) isn't unusual. Pushing a prop through water is much tougher on an engine than pushing tires on a highway.
