Solaris (2002) - IMDb

Solaris is a proprietary Unix operating system originally developed by Sun Microsystems. It superseded the company's earlier SunOS in 1993. In 2010, after the Sun acquisition by Oracle, it was renamed Oracle Solaris. Solaris is known for its scalability, especially on SPARC systems, and for originating many innovative features such as DTrace, ZFS and Time Slider.

Solaris (operating system) - Wikipedia

The Solaris mission has established a base on a planet that appears to host some kind of intelligence, but the details are hazy and very secret. After the mysterious demise of one of the three scientists on the base, the main character is sent out to replace him. He finds the station run-down and the two remaining scientists cold and secretive.

Solaris is an ocean planet that is being researched for its commercial or resource potential.

Solaris (2002) - Plot Summary - IMDb

Solaris (the name of the planet) makes most other descriptions of 'alien' worlds you have read seem positively homelike. "All human attempts to communicate with this creature have failed, sometimes with great loss of life. The deaths were due to its apparent indifference to human beings, for it is not hostile.
