First, ensure that the problem you're solving is in fact a static problem—i.e., that no acceleration (including angular acceleration) is involved. Remember: $\sum F = ma = 0$ $\sum F = ma = 0$ for these situations. If rotational motion is involved, the condition $\sum \tau = I\alpha = 0$ $\sum \tau = I\alpha = 0$ must also be satisfied, where τ is torque, I is the moment of inertia, and α is
